Biomarkers in Cancer Chemoprevention
International Agency For Research On Cancer

The International Agency for Research on Cancer (IARC) was established in 1965 by the World Health Assembly, as an independently financed organization within the framework of the World Health Organization. The headquarters of the Agency are in Lyon, France.

The Agency conducts a programme of research concentrating particularly on the epidemiology of cancer and the study of potential carcinogens in the human environment. Its field studies are supplemented by biological and chemical research carried out in the Agency’s laboratories in Lyon and, through collaborative research agreements, in national research institutions in many countries. The Agency also conducts a programme for the education and training of personnel for cancer research.

The publications of the Agency contribute to the dissemination of authoritative information on different aspects of cancer research. A complete list is printed at the back of this book. Information about IARC publications, and how to order them, is also available via the Internet at: http://www.iarc.fr/

Cover Illustrations:

Top left: Mammography
Bottom left: Confocal laser microscopy of an eosinophilic granulocyte from the lung
Top right: Tubular adenoma of the colon (N.J. Carr)
Bottom right: COX-2 expression in human hepatocellular carcinoma (S. Sakisaka)
Biomarkers in Cancer Chemoprevention

Edited by A.B. Miller, H. Bartsch, P. Boffetta, L. Dragsted and H. Vainio
