

Table of contents

Contributors	v
Acknowledgements	ix
Introduction	xi
Consensus statement	xv
Abbreviations	xix
 Part 1	
Concordance between cancer in humans and in experimental animals	
Chapter 1	1
Electrophilic agents	
 Chapter 2	23
Aromatic amines and aristolochic acids	
 Chapter 3	31
Arsenic and metals	
 Chapter 4	39
Arsenic and metals	
 Chapter 5	47
Arsenic and metals	
 Chapter 6	53
Anticancer agents: qualitative and quantitative aspects	
 Chapter 7	59
Polycyclic aromatic hydrocarbons and associated occupational exposures	
 Chapter 8	65
Benzene and haematological cancers	
 Chapter 9	71
Human tumour viruses	

Part 2	
Mechanisms of carcinogenesis	
Chapter 10	85
Key characteristics of carcinogens	
Chapter 11	93
Mechanisms of carcinogenesis: from initiation and promotion to the hallmarks	
Chapter 12	107
The role of genotoxicity in carcinogenesis	
Chapter 13	117
Alterations in cell proliferation, cell death, or nutrient supply	
Chapter 14	129
Receptor-mediated mechanisms	
Chapter 15	153
Oxidative stress and radical-induced signalling	
Chapter 16	159
Immunosuppression	
Chapter 17	165
Inflammation	
Chapter 18	175
Ionizing radiation	
Chapter 19	185
Host susceptibility	
Chapter 20	201
Age and susceptibility	
Part 3	
Statistical analyses of concordance and key characteristics	
Chapter 21	211
Analysis of tumour site concordance	
Chapter 22	257
Analysis of key characteristics of human carcinogens	
Annex 1	283
Development of a data set on tumours and tumour sites in humans and in experimental animals for Group 1 agents identified up to and including Volume 109 of the <i>IARC Monographs</i>	
Disclosures of interests	291
