LIST OF PARTICIPANTS	vii
NOTE TO THE READER	xi
ABSTRACT	1
INTRODUCTION	3
METHODS	9
Evidence from studies in experimental animals	9
Evidence from studies in humans	10
Combined evaluations of carcinogenic risk to humans	11
RESULTS AND CONCLUSIONS	12
List of chemicals carcinogenic for humans	12
List of chemicals probably carcinogenic for humans	12
List of chemicals with insufficient evidence to allow an evaluation	13
Mining and manufacturing processes	13
REFERENCES	19
APPENDIX: DESCRIPTIVE EVALUATIONS OF THE ANIMAL AND HUMAN EVIDENCE FOR CARCINOGENICITY OF THE CHEMICALS CONSIDERED	21
1. Acrylonitrile	21
2. Aflatoxins	21
3. 4-Aminobiphenyl	22
4. Amitrole (aminotriazole)	22
5. Arsenic and certain arsenic compounds	22
6. Asbestos	23
7. Auramine	
8. The manufacture of auramine	24
9. Benzene	24
10. Benzidine	25

11. Beryllium and certain beryllium compounds	25
12. <i>N,N</i> -Bis(2-chloroethyl)-2-naphthylamine (chlornaphazine)	26
13. Bis(chloromethyl)ether and technical grade chloromethyl methyl ether	26
14. Cadmium and certain cadmium compounds	27
15. Carbon tetrachloride	28
16. Chlorambucil	28
17. Chloramphenicol	28
18. Chlordane and heptachlor	29
19. Chloroprene	29
20. Chromium and certain chromium compounds	29
21. Cyclophosphamide	31
22. Dichlorodiphenyltrichloroethane (DDT)	31
23. Dieldrin	32
24. Diethylstilboestrol	32
25. Dimethylcarbamoyl chloride	33
26. Dimethyl sulphate	33
27. Epichlorohydrin	33
28. Ethylene oxide	34
29. Haematite	
30. Underground haematite mining	34
31. Hexachlorocyclohexane (technical HCH and lindane)	34
32. Iron dextran	35
33. Isoniazid	35
34. Isopropyl oils	
35. The manufacture of isopropyl alcohol (strong acid process)	36
36. Lead and certain lead compounds	36
37. Melfalan	37
38. Mustard gas	38
39. 2-Naphthylamine	38
40. Nickel and certain nickel compounds	
41. Nickel refining	38
42. Oxymetholone	39
43. Phenacetin	39
44. Phenobarbitone	39
45. <i>N</i> -Phenyl-2-naphthylamine	40
46. Phenytoin	41
47. Polychlorinated biphenyls	41
48. Reserpine	42
49. Soots, tars and mineral oils	43
50. Styrene	43
51. Trichloroethylene	44
52. Tris(aziridinyl)- <i>para</i> -benzoquinone (triaziquone)	44
53. Tris(1-aziridinyl)phosphine sulphide (thiotepa)	44
54. Vinyl chloride	45

ADDITIONAL CHEMICALS WITH EVIDENCE FROM HUMAN STUDIES	45
--	----

A. <i>ortho</i> - and <i>para</i> -Dichlorobenzene	45
B. 3,3'-Dichlorobenzidine	45
C. Phenylbutazone	46
D. 2,3,7,8-Tetrachlordibenzo- <i>para</i> -dioxin (TCDD)	46
E. <i>ortho</i> -Toluidine	47
F. Vinylidene chloride	47

CUMULATIVE INDEX TO IARC MONOGRAPHS VOLUMES 1-20 ON THE EVALUATION OF THE CARCINOGENIC RISK OF CHEMICALS TO HUMANS	49
--	----

INDEX OF CHEMICALS FROM MONOGRAPHS VOLUMES 1-20 BY POSSIBLE TARGET ORGANS IN HUMANS	67
--	----

TABLES:

Table 1. Chemical evaluated in <i>IARC Monographs</i> , Volumes 1-20 for which there is sufficient evidence of carcino- genicity in experimental animals	4
Table 2. Chemicals from <i>IARC Monographs</i> Volumes 1-20 with evidence from human studies which were not considered by the Working Group	8
Table 3. Classification of the degree of evidence of carcinogenicity for humans of chemicals or industrial processes	15
