List of Participants	1
Preamble	3
General Remarks	15

Handbook 1 All-trans-Retinoic Acid 95

1. Chemical and Physical Characteristics	95
1.1 Nomenclature	95
1.2 Name	95
1.3 Structural and molecular formulae and relative molecular mass	95
1.4 Physical and chemical properties	95
2. Occurrence, Production, Use, Human Exposure and Analysis	96
2.1 Occurrence	96
2.2 Production	96
2.3 Use	96
2.4 Human exposure	97
2.5 Analysis	97
3. Metabolism, Kinetics and Genetic Variation	97
3.1 Humans	97
3.2 Experimental models	98
4. Cancer-Preventive Effects	100
4.1 Humans	100
4.2 Experimental models	101
4.3 Mechanisms of cancer prevention	117
5. Other Beneficial Effects	120
6. Carcinogenicity	120
6.1 Humans	120
6.2 Experimental models	120
7. Other Toxic Effects	120
7.1 Adverse effects	120
7.2 Reproductive and developmental effects	124
7.3 Genetic and related effects	127
8. Summary of Data	128
8.1 Chemistry, occurrence and human exposure	128
8.2 Metabolism and kinetics	128

8.3 Cancer-preventive effects	130
8.4 Other beneficial effects	131
8.5 Carcinogenicity	131
8.6 Other toxic effects	131

9. Recommendations for Research .. 132

10. Evaluation	133
10.1 Cancer-preventive activity	133
10.2 Overall evaluation	133
11. References	133

Handbook 2 13-cis-Retinoic Acid 145

1. Chemical and Physical Characteristics	145
1.1 Nomenclature	145
1.2 Name	145
1.3 Structural and molecular formulae and relative molecular mass	145
1.4 Physical and chemical properties	145
2. Occurrence, Production, Use, Human Exposure and Analysis	145
2.1 Occurrence	145
2.2 Production	146
2.3 Use	146
2.4 Human exposure	146
2.5 Analysis	147
3. Metabolism, Kinetics and Genetic Variation	147
3.1 Humans	147
3.2 Experimental models	149
4. Cancer-preventive Effects	152
4.1 Humans	152
4.2 Experimental models	154
4.3 Mechanisms of cancer prevention	163
5. Other Beneficial Effects	163
6. Carcinogenicity	164
6.1 Humans	164
6.2 Experimental models	164
7. Other Toxic Effects	164
7.1 Adverse effects	164

7.2	Reproductive and developmental effects	168
7.3	Genetic and related effects	173
8.	Summary of Data	173
8.1	Chemistry, occurrence and human exposure	173
8.2	Metabolism and kinetics	173
8.3	Cancer-preventive effects	174
8.4	Other beneficial effects	175
8.5	Carcinogenicity	175
8.6	Other toxic effects	175
9.	Recommendations for Research	176
10.	Evaluation	176
10.1	Cancer-preventive activity	176
10.2	Overall evaluation	176
11.	References	176

Handbook 3 9-*cis*-Retinoic Acid 187

1.	Chemical and Physical Characteristics	187
1.1	Nomenclature	187
1.2	Name	187
1.3	Structural and molecular formulae and relative molecular mass	187
1.4	Physical and chemical properties	187
2.	Occurrence, Production, Use, Human Exposure and Analysis	188
2.1	Occurrence	188
2.2	Production	188
2.3	Use	188
2.4	Human exposure	188
2.5	Analysis	189
3.	Metabolism, Kinetics and Genetic Variation	189
3.1	Humans	189
3.2	Experimental models	190
4.	Cancer-preventive Effects	192
4.1	Humans	192
4.2	Experimental models	192
4.3	Mechanisms of cancer prevention	196
5.	Other Beneficial Effects	197
6.	Carcinogenicity	197

6.1	Humans	197
6.2	Experimental models	197
7.	Other Toxic Effects	198
7.1	Toxic and other adverse effects	198
7.2	Reproductive and developmental effects	200
7.3	Genetic and related effects	201
8.	Summary of Data	201
8.1	Chemistry, occurrence and human exposure	201
8.2	Metabolism and kinetics	201
8.3	Cancer-preventive effects	202
8.4	Other beneficial effects	202
8.5	Carcinogenicity	202
8.6	Other toxic effects	202
9.	Recommendations for Research	203
10.	Evaluation	203
10.1	Cancer-preventive activity	203
10.2	Overall evaluation	203
11.	References	203

Handbook 4 4-Hydroxyphenyl-retinamide 209

1.	Chemical and Physical Characteristics	209
1.1	Nomenclature	209
1.2	Name	209
1.3	Structural and molecular formulae and relative molecular mass	209
1.4	Physical and chemical properties	209
2.	Occurrence, Production, Use, Human Exposure and Analysis	210
2.1	Occurrence	210
2.2	Production	210
2.3	Use	210
2.4	Human exposure	210
2.5	Analysis	210
3.	Metabolism, Kinetics and Genetic Variation	211
3.1	Humans	211
3.2	Experimental models	212
4.	Cancer-preventive Effects	213
4.1	Humans	213
4.2	Experimental models	215

4.3	Mechanisms of cancer prevention . . .	323	3.2	Experimental models	248
5.	Other Beneficial Effects	225	4.	Cancer-preventive Effects	248
6.	Carcinogenicity	225	4.1	Humans	248
6.1	Humans	225	4.2	Experimental models	251
6.2	Experimental models	225	4.3	Mechanisms of cancer prevention . . .	261
7.	Other Toxic Effects	225	5.	Other Beneficial Effects	264
7.1	Adverse effects	225	6.	Carcinogenicity	264
7.2	Reproductive and developmental effects	228	6.1	Humans	264
7.3	Genetic and related effects	229	6.2	Experimental models	264
8.	Summary of Data	229	7.	Other Toxic Effects	264
8.1	Chemistry, occurrence and human exposure	229	7.1	Adverse effects	264
8.2	Metabolism and kinetics	229	7.2	Reproductive and developmental effects	268
8.3	Cancer-preventive effects	230	7.3	Genetic and related effects	271
8.4	Other beneficial effects	231	8.	Summary of Data	271
8.5	Carcinogenicity	231	8.1	Chemistry, occurrence and human exposure	271
8.6	Other toxic effects	231	8.2	Metabolism and kinetics	272
9.	Recommendations for Research . .	232	8.3	Cancer-preventive effects	272
10.	Evaluation	232	8.4	Other beneficial effects	273
10.1	Cancer-preventive activity	232	8.5	Carcinogenicity	273
10.2	Overall evaluation	232	8.6	Other toxic effects	273
11.	References	232	9.	Recommendations for Research . .	273
Handbook 5 Etretinate 241			10.	Evaluation	273
1.	Chemical and Physical Characteristics	241	10.1	Cancer-preventive activity	273
1.1	Nomenclature	241	10.2	Overall evaluation	273
1.2	Name	242	11.	References	274
1.3	Structural and molecular formulae and relative molecular mass	242	Handbook 6 Acitretin 285		
1.4	Physical and chemical properties	242	1.	Chemical and Physical Characteristics	285
2.	Occurrence, Production, Use, Human Exposure and Analysis . .	243	1.1	Nomenclature	285
2.1	Occurrence	243	1.2	Name	286
2.2	Production	243	1.3	Structural and molecular formulae and relative molecular mass	286
2.3	Use	244	1.4	Physical and chemical properties	286
2.4	Human exposure	245	2.	Occurrence, Production, Use, Human Exposure and Analysis . .	287
2.5	Analysis	246	2.1	Occurrence	287
3.	Metabolism, Kinetics and Genetic Variation	247	2.2	Production	287
3.1	Humans	247	2.3	Use	288

2.4	Human exposure	288
2.5	Analysis	288
3.	Metabolism, Kinetics and Genetic Variation	289
3.1	Humans	289
3.2	Experimental models	290
4.	Cancer-preventive Effects	290
4.1	Humans	290
4.2	Experimental models	291
4.3	Mechanisms of cancer prevention	296
5.	Other Beneficial Effects	296
6.	Carcinogenicity	296
6.1	Humans	296
6.2	Experimental models	296
7.	Other Toxic Effects	296
7.1	Adverse effects	296
7.2	Reproductive and developmental effects	297
7.3	Genetic and related effects	298
8.	Summary of Data	299
8.1	Chemistry, occurrence and human exposure	299
8.2	Metabolism and kinetics	299
8.3	Cancer-preventive effects	299
8.4	Other beneficial effects	300
8.5	Carcinogenicity	300
8.6	Other toxic effects	300
9.	Recommendations for Research	300
10.	Evaluation	301
10.1	Cancer-preventive activity	301
10.2	Overall evaluation	301
11.	References	301

Handbook 7 *N*-Ethylretinamide ... 307

1.	Chemical and Physical Characteristics	307
1.1	Nomenclature	307
1.2	Name	307
1.3	Structural and molecular formulae and relative molecular mass	307
1.4	Physical and chemical properties	307

2.	Occurrence, Production, Use, Human Exposure and Analysis	307
2.1	Occurrence	307
2.2	Production	307
2.3	Use	307
2.4	Human exposure	307
2.5	Analysis	307
3.	Metabolism, Kinetics and Genetic Variation	307
3.1	Humans	307
3.2	Experimental models	308
4.	Cancer-preventive Effects	308
4.1	Humans	308
4.2	Experimental models	308
4.3	Mechanisms of cancer prevention	312
5.	Other Beneficial Effects	313
6.	Carcinogenicity	313
6.1	Humans	313
6.2	Experimental models	313
7.	Other Toxic Effects	313
7.1	Adverse effects	313
7.2	Reproductive and developmental effects	313
7.3	Genetic and related effects	314
8.	Summary of Data	314
8.1	Chemistry, occurrence and human exposure	314
8.2	Metabolism and kinetics	314
8.3	Cancer-preventive effects	314
8.4	Other beneficial effects	314
8.5	Carcinogenicity	314
8.6	Other toxic effects	315
9.	Recommendations for Research	315
10.	Evaluation	315
10.1	Cancer-preventive activity	315
10.2	Overall evaluation	315
11.	References	315

Handbook 8 Targretin ... 317

1.	Chemical and Physical Characteristics	317
1.1	Nomenclature	317
1.2	Name	317

1.3	Structural and molecular formulae and relative molecular mass	317	1.1	Nomenclature	325
1.4	Physical and chemical properties	317	1.2	Name	325
2.	Occurrence, Production, Use, Human Exposure and Analysis . . .	317	1.3	Structural and molecular formulae and relative molecular mass	325
2.1	Occurrence	317	1.4	Physical and chemical properties	325
2.2	Production	317	2.	Occurrence, Production, Use, Human Exposure and Analysis . . .	325
2.3	Use	317	2.1	Occurrence	325
2.4	Human exposure	318	2.2	Production	325
2.5	Analysis	318	2.3	Use	325
3.	Metabolism, Kinetics and Genetic Variation	318	2.4	Human exposure	325
3.1	Humans	318	2.5	Analysis	326
3.2	Experimental models	318	3.	Metabolism, Kinetics and Genetic Variation	326
4.	Cancer-preventive Effects	318	3.1	Humans	326
4.1	Humans	318	3.2	Experimental models	326
4.2	Experimental models	319	4.	Cancer-preventive Effects	326
4.3	Mechanisms of cancer prevention . . .	319	4.1	Humans	326
5.	Other Beneficial Effects	319	4.2	Experimental models	326
6.	Carcinogenicity	321	4.3	Mechanisms of cancer prevention . . .	327
7.	Other Toxic Effects	321	5.	Other Beneficial Effects	328
7.1	Adverse effects	321	6.	Carcinogenicity	328
7.2	Reproductive and developmental effects	321	7.	Other Toxic Effects	328
7.3	Genetic and related effects	322	7.1	Adverse effects	328
8.	Summary of Data	322	7.2	Reproductive and developmental effects	328
8.1	Chemistry, occurrence and human exposure	322	7.3	Genetic and related effects	328
8.2	Metabolism and kinetics	322	8.	Summary of Data	328
8.3	Cancer-preventive effects	322	8.1	Chemistry, occurrence and human exposure	328
8.4	Other beneficial effects	322	8.2	Metabolism and kinetics	328
8.5	Carcinogenicity	322	8.3	Cancer-preventive effects	328
8.6	Other toxic effects	322	8.4	Other beneficial effects	328
9.	Recommendations for Research . .	322	8.5	Carcinogenicity	328
10.	Evaluation	323	8.6	Other toxic effects	328
10.1	Cancer-preventive activity	323	9.	Recommendations for Research . .	329
10.2	Overall evaluation	323	10.	Evaluation	329
11.	References	323	10.1	Cancer-preventive activity	329
Handbook 9 LGD 1550	325		10.2	Overall evaluation	329
1.	Chemical and Physical Characteristics	325	11.	References	329
