

Transformation zone types

Figure A1.1. Diagrammatic representations of types of transformation zone (TZ). (a) Type 1 TZ, which is completely ectocervical, is fully visible, and may be small or large. (b) Type 2 TZ, which has an endocervical component but is still fully visible; the ectocervical component may be small or large. (c) Type 3 TZ, which has an endocervical component, and the upper limit is not fully visible; the ectocervical component, if present, may be small or large.
