

# Index

When registries which appear in previous volumes of Cancer Incidence in Five Continents, but not in the present volume, are listed they are given with the number(s) of the volume(s).

## **Conventions adopted**

### *Permutation of terms*

In general, terms appear as usually written, e.g. 'oral mesopharynx' or 'ascending colon' rather than as 'mesopharynx, oral' or 'colon, ascending'. There are certain exceptions such as 'endocrine glands, other' and 'thoracic organs, other' to avoid a long list of terms included under 'other'. Subsites such as 'ascending colon' are cross-referenced and the page numbers given under the main site, i.e. 'colon'.

### *Registries*

The registries are indexed alphabetically by registry title, as it appears in the volumes, and not by continent, country or province, as in the list of contents. However, following each registry title is an indication of country and province (or similar subdivision) for those registries with sub-national cover.

### *Anatomical sites*

The index lists the titles of the categories for which incidence data have been published (see Chapters 3 and 4).

### *Cross-references*

In general cross-references direct attention to the rubric title which includes a given subdivision. Thus the entry Pyriform fossa (sinus) - see hypopharynx leads the reader to a listing of all information available concerning the hypopharynx.

### *Ethnic group*

Ethnic group is indexed only when a registry publishes separate data for the ethnic groups living in the registration area, e.g. Japanese appear under Hawaii, Los Angeles and San Francisco.

### *Abbreviations and symbols*

ASR	- age-standardized rates
CR	- cumulative rate
ICD-10	- 10th Revision of the International Classification of Diseases (ICD)
D & IR	- description of registry and age-specific incidence rates

- Adrenal gland
