

Table of contents

Foreword and Acknowledgements	iv
Working Group members	v
Executive summary	viii
Abbreviations	xv
Chapter 1	1
Global trends in overweight and obesity	
Chapter 2	9
The double burden of malnutrition in low- and middle-income countries	
Chapter 3	17
Can energy intake and expenditure (energy balance) be measured accurately in epidemiological studies? Is this important?	
Chapter 4	25
How are components of dietary intake, dietary composition, foods, and nutrients related to obesity and weight gain?	
Chapter 5	37
How are overall energy intake and expenditure related to obesity?	
Chapter 6	43
Physical activity, sedentary behaviour, and obesity	
Chapter 7	49
What existing epidemiological data could serve to better understand the relationship of energy intake and expenditure to obesity and the obesity epidemic?	
Chapter 8	57
Cultural determinants of obesity in low- and middle-income countries in the Eastern Mediterranean Region	
Chapter 9	69
Potential mechanisms in childhood obesity: causes and prevention	
Chapter 10	79
The interplay of genes, lifestyle, and obesity	
Chapter 11	89
The gut microbiota and obesity	
Chapter 12	95
Molecular and metabolic mechanisms underlying the obesity–cancer link	
Chapter 13	105
What steps should be recommended and implemented to prevent and control the obesity epidemic?	
Chapter 14	113
Which new data are needed to explore the relationships of diet and dietary patterns to obesity and weight gain?	
Disclosures of interests	119
