2001 Cont 1007 Roch medi Expo Ques ham	2001). Controls: 1007; Clinic-based controls from Mayo Clinic Rochester patients with prescheduled general medical examinations, at least 18 years old. Exposure assessment method: Questionnaire; Processed meat includes hot dogs, ham, bologna and lunch meats, i.e. red meat includes		Trend-test p-value: 0.03					

processed meat.

Table 2.9.4 Case-control studies: Processed meat and other cancers (web only)						
Reference, location enrolment/follo w-up period, study design	Population size, description, exposure assessment method	Organ site	Exposure category or level	Exposed cases/deaths	Risk estimate (95% CI)	Covariates controlled
De Stefani et al. (2013) Uruguay 1996–2004 Case-Control	 Cases: 369; All incident, microscopically confirmed NHL cases diagnosed in the National Cancer Institute were eligible. Defined according to WHO 2001 classification. All cases were from the low socioeconomic strata of the Uruguayan population. Controls: 3606; Random selection from the same institute among patients with nonneoplastic conditions not related to tobacco smoking and alcohol drinking, age matched to cases. Exposure assessment method: Questionnaire; FFQ at personal interview, focused on red meat, salted meat, barbecued meat, processed meat, whole milk, total vegetables, total fruits, beer, red wine, hard liquor, and maté consumption. No mention of validation or number of items. Processed meat: bacon, sausage, blood pudding, mortadella, salami, saucisson, hot dog, ham. Frequency in servings per year. 	NHL: Non- Hodgkin's	Tertiles of processed meat consumption (servings/year)		Age, sex, residence, urban/rural status,	
		lymphoma (WHO 2001)	T1	NR	1	education, body mass index, smoking intensity (in pack yr), alcohol drinking, maté consumption, total vegetable and fruit
			T2	NR	1.59 (1.23–2.06)	
			Т3	NR	0.95 (0.72–1.25)	
			Trend-test p-value: 0.86			intake, total energy
		NHL: Non- Hodgkin's lymphoma (WHO 2001)	Tertiles of salted meat intake, servings/year			Same as above
			ТІ	NR	1	
			TII	NR	1.58 (1.11–2.24)	
			ТШ	NR	2.29 (1.62–3.22)	
			Trend-test p-value: < 0.0001
