

# Chapter 1: Introduction and guide to this volume

Freddie Bray and Jacques Ferlay

The *Cancer Incidence in Five Continents* (CI5) series, published jointly by the International Agency for Research on Cancer (IARC) and the International Association of Cancer Registries (IACR), remains a unique source of data on cancer incidence around the world. The principal objective of the series is to present comparable data on cancer incidence for all countries around the world for which high-quality data have been made available by population-based cancer registries. The provision of comparable incidence data by place (within volumes) and over time (between volumes) provides evidence of the environmental, lifestyle, and infectious origin of many common cancers, and their potential avoidability (Doll et al., 1966; Bray et al., 2015).

This volume of CI5 (Volume XI) provides information about cancers diagnosed during the period from 2008 to 2012. Every effort has been made to ensure that the information included in this volume can be used with assurance to compare geographical patterns and – by comparison with data from earlier volumes – temporal trends in cancer. In CI5 Volume I, the editors remarked that “the most valuable data are, undoubtedly, the rates obtained by recording the occurrence of every case of cancer in a defined community over a specified period” (Doll et al., 1966). More than a half century later, in Volume XI, this principle remains the *raison d’être* for the CI5 series. The recording and assessment of rates remains a core task of cancer registries today, and it is the function of CI5 to report registry results using a common format.

## CALL FOR DATA

For CI5 Volume XI, a call for data and an accompanying questionnaire were sent to all population-based cancer registries that were members of IACR in June 2015. The call for data and the questionnaire were also published on the IACR website, with both documents available in English, French, and Spanish. Registries

that wished to submit datasets for Volume XI were requested to do so using the IARC Registries Portal (see Chapter 6), and the questionnaire was available for completion online. Detailed instructions for preparing the registry dataset and the accompanying mortality and population information were provided in the call for data. In some countries, registries delegated data submission to their national associations or networks, but each registry was required to submit its own responses to the questionnaire.

Although the reference time period for Volume XI was defined as 2008–2012, contributors were also asked to send data for years before and (if available) after the reference period, to allow the volume editors to verify certain aspects of quality, comparability, and completeness for each submission. Not all registries were able to provide data for the whole time period covered by Volume XI, but a minimum consecutive series of 3 years was required for a registry to be considered for inclusion.

## NUMBER OF DATASETS RECEIVED AND INCLUDED

Data were received from 483 cancer registries covering 636 populations in 90 countries. Data from 140 cancer registries, representing 171 populations, were excluded. Volume XI consequently presents cancer incidence data from 65 countries, 343 cancer registries, and 465 populations (Table 1.1).

## GEOGRAPHICAL COVERAGE IN CI5 VOLUME XI

The geographical coverage in CI5 Volume XI by continent is shown in Table 1.2. Data are included from 6 of the 21 African countries that submitted data, 11 of the 13 Central and South American countries, 2 of the 3 North American countries, 17 of the 21 Asian countries, 28 of the 31 European countries, and 4 of the 4 Oceanic countries.

**Table 1.1. The number of cancer registry datasets (2008–2012) submitted to and accepted for CI5 Volume XI**

	Submitted	Accepted
Countries	90	65
Registries	483	343
Populations	636	465

**Table 1.2. Geographical coverage in CI5 Volume XI by continent**

	Countries		Registries		Populations	
	Submitted	Accepted	Submitted	Accepted	Submitted	Accepted
Africa	21	6	30	7	30	7
Central and South America	13	11	45	31	45	31
North America	3	2	71	69	206	171
Asia	21	17	182	97	187	105
Europe	31	28	143	127	145	129
Oceania	4	4	12	12	23	22
Total	90*	66*	483	343	636	465

\*The sum of the number of individual countries is greater than the total, reflecting the fact that some countries (i.e. France and the USA) have territory on more than one continent.

The proportions of cancer registries that submitted datasets for Volume XI and were accepted for inclusion (by continent) are as follows: Africa, 23% (7/30); Central and South America, 69% (31/45); North America, 97% (69/71); Asia, 53% (97/182); Europe, 88% (127/143); and Oceania: 100% (12/12).

The proportion of the world's total population covered by the registries included in Volume XI is 15%, with the following levels of coverage by continent: Africa, 1%; Central and South America, 8%; North America, 98%; Asia, 7%; Europe, 46%; and Oceania, 77%.

#### **COVERAGE IN THE 11 VOLUMES OF CI5**

Fig. 1.1 shows the overall coverage in terms of the number of countries, registries, and populations included in each volume of CI5. A full overview identifying all the registry populations appearing in all 11 volumes, as well as the specific incidence time periods contributed by each registry, is provided in Table 1.3 at the end of this chapter.

The steady increase in coverage of the world's population by cancer registration has been accompanied by critical developments in the standardization of registration methodology, definitions, and coding. The editors of the present volume, building on the foundation laid in the first volumes, have made every effort to standardize the data presented, or where this was not possible, to draw attention to any differences that might affect comparability between registries. The editorial processes of checking internal coherence, consistency, and completeness are described in Chapters 5 and 6 of this volume and are broadly based on principles outlined in IARC Scientific Publication No. 95 (Jensen et al., 1991) and IARC Technical Publication No. 43 (Bray et al., 2014).

Improved definition of registration methodology and increased adherence to internationally recognized standards have also led to more stringent editorial processes. With each successive volume of CI5, the editors have become more demanding about the quality of the data published in the book. However, the editors also have to accept that some datasets from registries in lower-income countries may be less

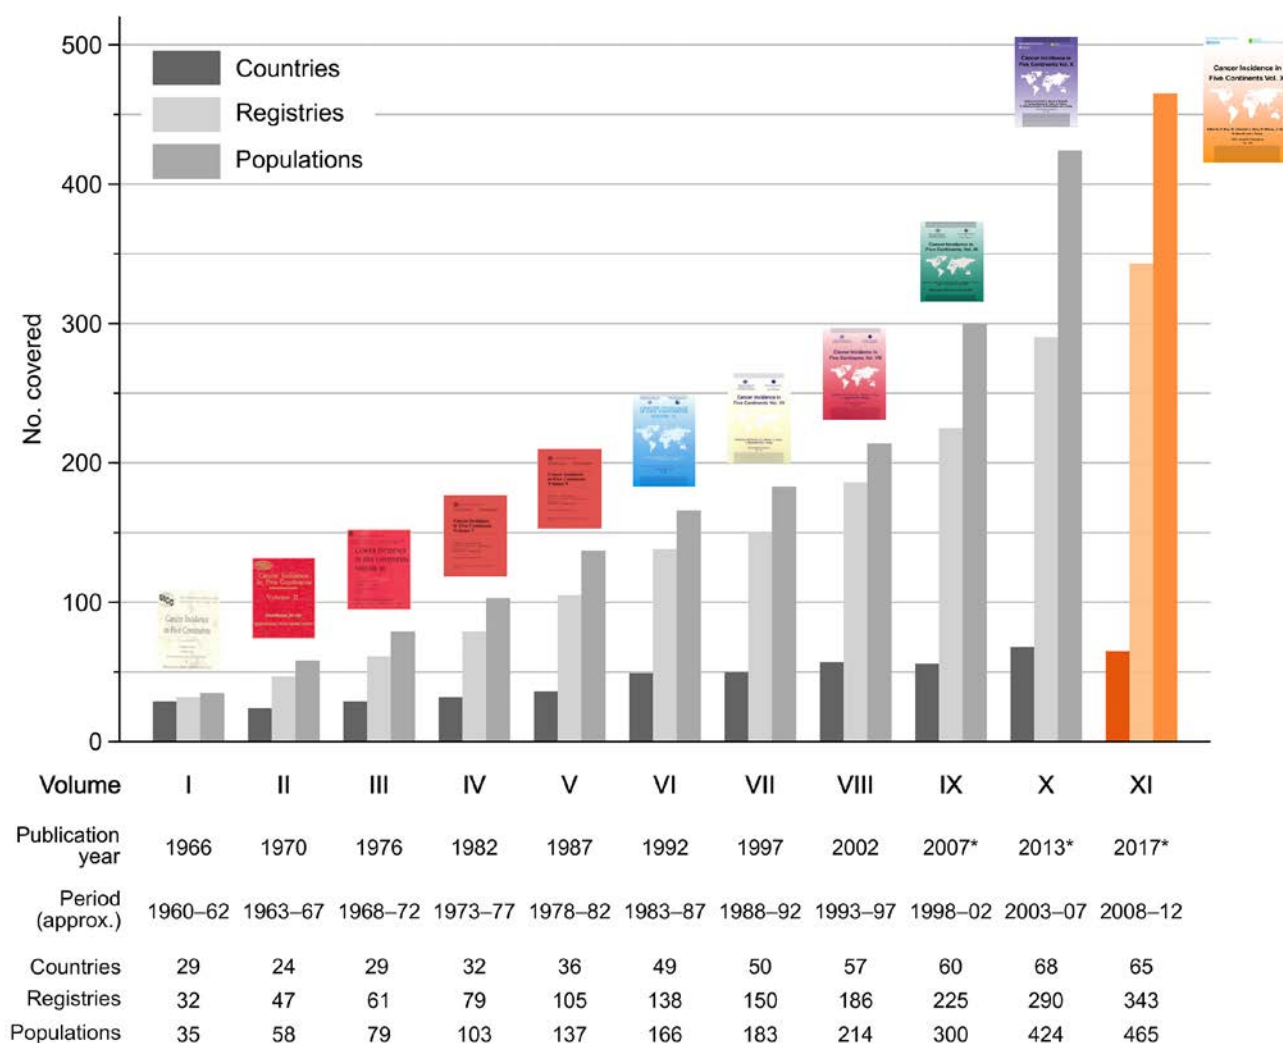

complete than those from registries in higher-income countries, because of problems of underdiagnosis due to local medical and economic situations (as opposed to underregistration) and/or problems with enumeration of the population. But these datasets are nevertheless of great interest because they describe cancer incidence in populations for which no other information is available and that retain unique cultural habits that may provide valuable clues to cancer etiology.

On the pages of this volume that present tables reporting the data from each registry by site, an asterisk preceding the registry title indicates that special considerations (which may include underregistration) must be taken into account in interpreting the published rates or indicators of quality (see Chapter 5). The specific reasons for a given asterisk are stated under the heading "Notes on the data" in the accompanying text.

#### **CONTENT AND LAYOUT OF THE BOOK**

For the first time in the history of the CI5 series, Volume XI is being published in a somewhat abridged version compared with the format that has been a constant across all 10 of the previous volumes. This is necessary, given the ever-expanding number of registries worldwide (notably in China) contributing to CI5; based on the previous template in a single publication, Volume XI would have had about 2000 pages. Furthermore, the focus is now on developing online tools that enable visual exploration of this incredibly rich data source: documenting the necessary registry information – the registration area, the population covered, the cancer care facilities, the data acquisition and processing techniques, and the source(s) of population data – alongside dedicated analytical tools for the data from individual registries on the IACR website (<http://iacr.com.fr>), and focusing on an exposition of the secular trends that are (to a certain extent) representative of a single country on the forthcoming Cancer Over Time subsite of the IARC Global Cancer Observatory (<https://gco.iarc.fr>).

Maps showing the location of each contributing registry are provided on pages 2–20.

**Fig. 1.1.** Coverage in the 11 volumes of CI5. \*Year data first available.

### **Introductory chapters**

In this volume, after this introductory text, Chapter 2 describes the registries in terms of geographical location, legislative background, and registration practices. Chapter 3 presents the system of classification used to report the incidence data, and addresses the issue of comparability of coding practices between the registries. For selected cancers, the data have been analysed by histological subtype within site. Chapter 4 introduces the histological groupings used and explains the rationale behind them.

Issues that can affect comparability between registries and validity of registry data are discussed in Chapter 5, as are the methods by which the submitted datasets were assessed. Chapter 6 describes how the raw data received for CI5 were processed. Finally, Chapter 7 describes the summary measures of incidence used in this volume to enable comparisons across registry populations.

### **Registry-specific entries**

After the standard introductory chapters, registry-specific entries are presented in alphabetical order within each world region. Each population label

includes the name of the country, the name of the region (if applicable), the name of the subpopulation (such as racial or ethnic group, if applicable), and the time period of data contribution. Each registry-specific entry provides a list of individual contributors at the registry, together with summary statistics from the accepted dataset.

For each population defined by a registry, a population pyramid is provided, showing the average annual person-years at risk during the reference period, for males and females, in 5-year age groups. The number of age groups depends on the age distribution of the population data provided. The horizontal bars of the pyramids represent the percentage contribution of each sex–age group to the total population. References to the source(s) of population data are provided.

A table is provided that shows the sex-specific age-standardized rates per 100 000 population observed in each registry area during the reference period for the 20 most common cancers, and for all sites combined. In addition, a one-page overview table per population presents sex-specific statistics for all ages: the total number of cases, the percentage contribution of each cancer site to the total, and the incidence rates (crude

and standardized rates per 100 000, and cumulative rates for the age ranges 0–64 years and 0–74 years, expressed as percentages). The cancer sites are arranged in ascending order of International Statistical Classification of Diseases and Related Health Problems, 10th revision (ICD-10) codes, which are displayed along with the site labels. Where applicable, these tables are provided for each subpopulation defined by the registry.

### **Comparative cancer incidence tables**

What follows are comparative summary tables by site (ICD-10 three-digit rubrics). The set of tables shows all cancers combined (including and excluding non-melanoma skin cancers), the three-digit (ICD-10) cancer sites described in Chapter 3, and the three grouped categories “Head and neck”, “Colon and rectum”, and “Leukaemia”. Each table for these categories shows sex-specific data for all ages combined, including the number of cases, the age-standardized incidence rate (using the world standard population), and the cumulative incidence rate for the age range 0–74 years. The rates are accompanied by their standard errors.

All submitted datasets were subjected to computerized records checks and editorial review. The decision about whether to include a given dataset in Volume XI was largely based on the data quality indicators, which are described and tabulated in Chapter 5. Other indicators are presented systematically for all registries in the site-specific tables entitled *Indices of data quality* located at the end of this volume.

### **FUTURE DIRECTIONS OF CI5**

As stated, the online presence of CI5 will seek to draw attention to the data as critical to national and global cancer control and cancer research. These features will be available as part of the IARC Global Cancer Observatory in the Cancer Over Time subsite, with a focus on national trends, based on national or subnational registry data included in consecutive volumes of CI5, and on the IACR website, which will include narratives of the registries included in each volume, including the present one, with registry-specific data analyses available online.

This long-standing collaboration between IARC and IACR serves as a unique source of cancer incidence data from high-quality population-based cancer registries around the world. It continues to be an invaluable resource for cancer research and cancer control worldwide, and is the primary source of GLOBOCAN and national estimates in 185 countries by cancer, sex, and age, currently for 2020 (<https://gco.iarc.fr/today/>).

In closing, it is worth restating that the ability to publish results and demonstrate progress is a challenge for many registries in resource-limited settings. The strict criteria of CI5 can be a limiting factor to inclusion for registries. To ensure a more equitable means of disseminating results, there is also a plan to develop a set of parallel continental reports that will include data from all population-based registries within defined regions. These reports will include discussion of the specific difficulties in the registries and possible solutions. This activity aims to link the complementary activities of the IARC-led Global Initiative for Cancer Registry Development (<https://gicr.iarc.fr>) and those of IACR to foster and enhance regional networking.

### **ACKNOWLEDGEMENTS**

The editors would like to thank Sébastien Antoni, who spent considerable time processing the data and questionnaire responses sent by each submitting registry. The CI5 Volume XI Editorial Board, IACR, and IARC take this opportunity to thank the many directors and registrars of cancer registries around the world that submitted their data to Volume XI of CI5, for their efforts to produce cancer incidence data and make them available to the global community. Their work remains the cornerstone of descriptive cancer epidemiology and provides a basis for future cancer research and cancer control policies.
