## Contents

Foreword ix
Preface x
Introduction xii

### 1 The global cancer burden

1.1 The burden and prevention of premature deaths from noncommunicable diseases, including cancer: a global perspective 15
1.2 Global trends in cancer incidence and mortality 23
1.3 Transitions in human development and the global cancer burden 34

**Known causes of human cancer by organ site**

### 2 Causes of cancer, including hazardous circumstances

2.1 Tobacco products 49
   *Massive and still growing causes of cancer worldwide*

2.2 Infectious agents 50
   *Missed opportunities for prevention*

2.3 Alcohol consumption 68
   *A leading risk factor for cancer*

2.4 Sunlight and ultraviolet radiation 77
   *Affecting skin cancer incidence in many countries*

2.5 Ionizing radiation and radiofrequency electromagnetic fields 84
   *Further clarification of particular risks*

2.6 Diet and nutrition 92
   *Understanding which factors are critical*

2.7 Physical activity, sedentary behaviour, and obesity 101
   *Established and emerging modifiable risk factors*

2.8 Dietary carcinogens 109
   *A continuing concern in various contexts*

2.9 Contamination of air, water, soil, and food 115
   *The challenge is to characterize specific risks*

2.10 Occupation 127
   *The need for continuing vigilance*

2.11 Pharmaceutical drugs 137
   *A current focus on hormones*

### 3 Biological processes in cancer development

3.1 Sporadic cancer 148
   *Tumorigenesis in the absence of an established or avoidable cause*

3.2 Genomics 154
   *Susceptibility and somatic patterns*

3.3 Gene–environment interactions 164
   *The preventive implications are still not clear*

3.4 DNA repair and genetic instability 170
   *Endogenous and exogenous sources of damage and hereditary syndromes*

3.5 Inflammation 181
   *Playing a pivotal role in cancer pathogenesis*

3.6 Reproductive and hormonal factors 189
   *Important contributors to several cancer sites*

3.7 Metabolic change and metabolomics 200
   *Emerging approaches and new insights*

3.8 Epigenetics 206
   *Potential in diagnostics, therapy, and prevention*

3.9 Immune function 215
   *From the tumour microenvironment to therapeutic targeting*

3.10 The microbiome 221
   *Its influence on tumorigenesis and therapy*

3.11 Identifying carcinogens from 10 key characteristics 229
   *A new approach based on mechanisms*

### 4 Inequalities that affect cancer prevention

4.1 Inequalities between and within countries 238
   *Impact on cancer prevention*

4.2 Socioeconomic factors and cancer prevention in Africa 246
   *Cervical cancer as an example*

4.3 Cancer in urban and rural communities in China 252
   *Patterns reflect social dynamics*

4.4 Socioeconomic factors and cancer prevention in India 258
   *Diverse interventions are needed*

World Cancer Research Fund International/ American Institute for Cancer Research 144

The IARC Handbooks of Cancer Prevention 236
4.5 Variations in implementation of cancer screening in European countries
Striving for best practice

4.6 Disparities in cancer prevention services in the USA
A long-standing, persistent cause of inequity

4.7 Cancer in Indigenous populations
Focusing on inequalities that are sometimes invisible

Towards the World Code Against Cancer

5 Preventing particular tumour types
A guide to the epidemiology data in Section 5:
Preventing particular tumour types

5.1 Lung cancer
Continues to be the leading cause of cancer death

5.2 Head and neck cancers
New etiological insights

5.3 Oesophageal cancer
A tale of two malignancies

5.4 Stomach cancer
Still one of the main cancer types worldwide

5.5 Colorectal cancer
Decreasing disparities and promoting prevention are policy priorities

5.6 Liver cancer
An infectious disease for many communities

5.7 Pancreatic cancer
Many risk factors too poorly characterized to enable prevention

5.8 Skin cancer
A focus on primary prevention

5.9 Breast cancer
Multiple, often complex, risk factors

5.10 Cervical cancer
Successes in some communities to be extended worldwide

5.11 Endometrial cancer
Prevention through control of obesity

5.12 Ovarian cancer
Complicated etiology and very few preventive options

5.13 Prostate cancer
Challenges for prevention, detection, and treatment

5.14 Testicular cancer
New inroads into early diagnosis

5.15 Bladder cancer
A genotoxic causal agent recognized

5.16 Kidney cancer
Multiple risk factors, but currently limited preventive strategies

5.17 Brain cancer
Increasing attention on the immune response

5.18 Thyroid cancer
The challenge of overdiagnosis

5.19 Non-Hodgkin lymphoma
Complex etiology, including the role of immune function

5.20 Leukaemias
Understanding pathogenesis through similarities and differences

WHO Report on Cancer: Setting priorities, investing wisely and providing care for all

6 The basis for, and outcomes from, prevention strategies
Tobacco cessation: the WHO perspective

6.1 Changing behaviour
The need for sustainable implementation

6.2 Improving diet and nutrition, physical activity, and body weight
From evidence to practice

6.3 Vaccination
The prospect of eliminating some cancer types

6.4 Preventive therapy
Certain interventions clearly established

6.5 Managing people with high and moderate genetic risk
Genomic tools to promote effective cancer risk reduction

6.6 Screening
From biology to public health

6.7 Circulating DNA and other biomarkers for early diagnosis
Great potential, but challenges recognized

6.8 Governmental action to control carcinogen exposure
Multiple options covering diverse scenarios

6.9 Prevention strategies common to noncommunicable diseases
A focus on tobacco, alcohol, obesity, and physical inactivity
